Summary

As a Computer Science and Engineering (CSE) student, I am a passionate Frontend Developer with a strong foundation in modern web technologies and algorithmic problem-solving. I specialize in building responsive, user-centric applications using HTML, CSS (Tailwind), React, API while actively honing my technical depth through C++ and competitive programming. With a portfolio of successfully deployed projects—from real-time chat systems to management tools—I am eager to apply my growing expertise in a professional environment and contribute to impactful software solutions.

University of Barishal, Barishal, BD *April*
Bachelor of Science in Computer Science *2026*

- Relevant Coursework: Computer Networks, Computer Architecture, Data Structures and Algorithms
- Completed a 12-week Frontend Web Development Bootcamp

Certifications

- Frontend Web Development– [Programming Hero] (2026)
- Responsive Web Design Specialist (React & Tailwind CSS) – (2025)
- Frontend Development Foundations (JavaScript/ES6+) – (2025)
- Introduction to Database Systems (MySQL & MongoDB) – (2024)

Projects

Personal Portfolio & DigiTools Landing Page | Jan 2026 – Present React, Tailwind CSS, DaisyUI, Vite * Designed and deployed a high-performance personal website and a "DigiTools" landing page to showcase full-stack projects.

- Built responsive, modern UI components including pricing cards, gradient-styled navigation, and optimized layouts for mobile and desktop.
- Utilized Git and GitHub for version control and successfully deployed live versions via Netlify and GitHub Pages.

GitHub Issue & Job Tracker Applications | Feb 2026 – March 2026 JavaScript (ES6+), REST APIs, LocalStorage * Developed functional tracking tools to manage workflow, utilizing complex filtering logic and search functionality.

- Implemented interactive modals and dynamic state management to ensure a seamless user experience.
- Integrated API logic to fetch and display real-time data efficiently.

Real-Time Chat Application | February 2026 Node.js, Socket.io, Express * Built a functional backend to support real-time, bi-directional communication between clients.

- Managed server-side event handling and frontend integration to ensure low-latency message delivery.

SQL Employee Tracker (CLI) | February 2026 Node.js, MySQL, Inquirer * Built a command-line application to manage employees, roles, and departments using a relational database

- .Wrote complex SQL queries to view, add, and update employee data across multiple linked tables.
- Designed database schemas and relationships to efficiently organize and track company data.

Student Management System (C++ Lab) | Jan 2026 – Feb 2026 C++, File Handling, OOP * Architected a desktop-based management system using C++ and advanced file-handling for persistent data storage.

- Applied Object-Oriented Programming (OOP) principles to manage student records, grades, and administrative data.
- Optimized data retrieval and storage logic to ensure system stability and performance.

Competitive Programming & Problem Solving | Ongoing C++, Data Structures, Algorithms * Actively solve algorithmic challenges on platforms like Codeforces and LeetCode, focusing on optimizing time and space complexity ($O(n \log n)$ and $O(1)$).Strengthened logical reasoning by implementing advanced data structures (Trees, Graphs, Linked Lists) from scratch. **Professional Experience**

Technical Skills

Programming & Frameworks: JavaScript (ES6+), React.js, C++, Java, SQL, HTML5, CSS3, Tailwind CSS, DaisyUI.

Backend & Databases: Node.js, Express.js, MongoDB, MySQL.

Tools & Environment: Git, GitHub, VS Code, Vite, Virtual Machines (Linux/Windows).

Deployment & Cloud: Netlify, GitHub Pages, Vercel, Firebase.

IT & Systems: System Configuration, Networking Fundamentals, Troubleshooting, AI-Assisted Development.
